The effects of heat and mass transport on the results of thermal decomposition studies. Part 1. The three reactions of calcium oxalate monohydrate 71
Szekely, T.
–, Varhegyi, G., Till, F., Szabo, P. and Jakab, E.
The effects of heat and mass transport on the results of thermal decomposition studies. Part 2. Polystyrene, polytetrafluoroethylene and polypropylene 83

Tas, A.C.
–, De Waart, J., Bouwman, J., Ten Noever de Brauw, M.C. and Van der Greef, J.
Rapid characterization of *Salmonella* strains with direct chemical ionization pyrolysis 329
Ten Noever de Brauw, M.C., see Tas, A.C. 329
Till, F., see Szekely, T. 71, 83
Tom, A., see Pouwels, A.D. 417
Tsuge, S.
–, Ohtani, H., Matsubara, H. and Ohsawa, M.
Some empirical considerations on the pyrolysis–gas chromatographic conditions required to obtain characteristic and reliable high-resolution pyrograms for polymer samples 181

Van der Greef, J., see Tas, A.C. 329
Van Smeerdijk, D.G.
– and Boon, J.J.
Characterisation of subfossil *Sphagnum* leaves, rootlets of Ericaceae and their peat by pyrolysis–high-resolution gas chromatography–mass spectrometry 377
Varhegyi, G., see Szekely, T. 71, 83
Vijayakumar, C.T., see Irzl, G.H. 277

Waart, J. de, see Tas, A.C. 329
Westall, W.A.
– and Pidduck, A.J.
Temperature programmed pyrolysis–mass spectrometry 3
Wheals, B.B., see Wright, M.M. 195
Wright, M.M.
– and Wheals, B.B.
Pyrolysis–mass spectrometry of natural gums, resins, and waxes and its use for detecting such materials in ancient Egyptian mummy cases (cartonnages) 195

Zelei, B., see Blazsó, M. 233

Subject Index

ABS (polymer)
Mechanism of action and pyrolysis of brominated fire retardants in acrylonitrile–butadiene–styrene polymers 511
Adhesives
Pyrolysis–mass spectrometry studies of adhesives 213
Alcohols
Characterization of the aliphatic nature of kerogens isolated from marine sediments by vacuum pyrolysis 109
Alkanes
Characterization of the aliphatic nature of kerogens isolated from marine sediments by vacuum pyrolysis 109
Alkenes
Characterization of the aliphatic nature of kerogens isolated from marine sediments by vacuum pyrolysis 109
Amino acids
Amino acid sequence information in proteins and complex proteinaceous material revealed by pyrolysis–capillary gas chromatography–low and high resolution mass spectrometry 313
Amino resins
Determination of reactive comonomers and/or amino resins in acrylic copolymers used in textile industry, by pyrolysis–gas chromatography–mass spectrometry 227
Anhydro sugars
Characterization of the saccharide composition of heteropolysaccharides by pyrolysis–capillary gas chromatography–mass spectrometry 297
Antimony oxide
Pyrolysis studies of flame retarded plastic systems 499
Asphaltenes
A review of biomarkers in kerogens as determined by pyrolysis–gas chromatography and pyrolysis–gas chromatography–mass spectrometry 93

Bacteria
Rapid characterization of *Salmonella* strains with direct chemical ionization pyrolysis 329
Biomarkers
A review of biomarkers in kerogens as determined by pyrolysis–gas chromatography and pyrolysis–gas chromatography-mass spectrometry 93
Biomass
Chemical characterization of recent and buried woods by analytical pyrolysis. Comparison of pyrolysis data with ^{13}C NMR and wet chemical data 437
Biomass
Comparison of flash pyrolysis, differential scanning calorimetry, ^{13}C NMR and IR spectroscopy in the analysis of a highly aliphatic biopolymer from plant cuticles 287
Biopolymers
Chemical structure of a soil humic acid as revealed by analytical pyrolysis 367
Birch
Pyrolysis and combustion of peat and wood as single particles and as a layer 149
Brown coal
Chemical characterization of Hungarian brown coals by Curie-point pyrolysis–low-energy electron impact mass spectrometry and multivariate analysis and by Curie-point pyrolysis–gas chromatography–photoionization mass spectrometry 125

Calcium oxalate
The effects of heat and mass transport on the results of thermal decomposition studies. Part 1. The three reactions of calcium oxalate monohydrate 71
Canonical variates analysis
The potential of pyrolysis–mass spectrometry for fermentation quality control 549
Carbohydrates
Carbohydrate pyrolysis. I. A continuous mass spectrometric method for the analysis of the resulting gaseous mixture 341
Carbohydrates
Characterization of the saccharide composition of heteropolysaccharides by pyrolysis–capillary gas chromatography–mass spectrometry 297
Cartonnages
Pyrolysis–mass spectrometry of natural gums, resins, and waxes and its use for detecting such materials in ancient Egyptian mummy cases (cartonnages) 195
Cellulose
Characterisation of beech wood and its holo-

cellulose and xylan fractions by pyrolysis–gas chromatography–mass spectrometry 417
Cellulose
Studies on isolated lignins and lignins in woody materials by pyrolysis–gas chromatography–mass spectrometry and off-line pyrolysis–gas chromatography with flame ionization detection 403
Cellulose ammonium phosphate
Studies on the flame-retardant properties of transition metal complexes of cellulose ammonium phosphate 465
Chlorolignin
Characterisation of beech wood and its holocellulose and xylan fractions by pyrolysis–gas chromatography–mass spectrometry 417
Cigarettes
A review of pyrolysis studies to unravel reaction steps in burning tobacco 555
Collision number
Techniques in gas-phase thermolyses. Part 8. The fate of molecules in low-pressure pyrolysis reactors. A theoretical study 25
Combustion
A review of pyrolysis studies to unravel reaction steps in burning tobacco 555
Combustion
Pyrolysis and combustion of peat and wood as single particles and as a layer 149
Combustion
The role of pyrolysis in polymer combustion and flame retardance 451
Comonomers
Determination of reactive comonomers and/or amino resins in acrylic copolymers used in textile industry, by pyrolysis–gas chromatography–mass spectrometry 227
Copolymers
Degradation of synthetic polymers: application of some pyrolysis methods in an investigation of the degradation behaviour of ionomers containing methacrylate salt units 163
Curie-point pyrolysis
Chemical characterization of Hungarian brown coals by Curie-point pyrolysis–low-energy electron impact mass spectrometry and multivariate analysis and by Curie-point pyrolysis–gas chromatography–photoionization mass spectrometry 125
Curie-point pyrolysis
Techniques in gas-phase thermolyses. Part 8. The fate of molecules in low-pressure pyrolysis reactors. A theoretical study 25
Cuticles
Comparison of flash pyrolysis, differential scanning calorimetry, ^{13}C NMR and IR spectroscopy in the analysis of a highly aliphatic biopolymer from plant cuticles 287
Cyclopenta-1,3-diene, hexachloro-
A comparative study of the thermal degradation of unsaturated polyester resins containing various chlorinated norbornene dicarboxylic acid units in the backbone 277
Cyclopenta-1,3-diene, 1,2,3,4,5-pentachloro-
A comparative study of the thermal degradation of unsaturated polyester resins containing various chlorinated norbornene dicarboxylic acid units in the backbone 277
Cyclopenta-1,3-diene, 1,2,3,4-tetrachloro-
A comparative study of the thermal degradation of unsaturated polyester resins containing various chlorinated norbornene dicarboxylic acid units in the backbone 277

Decabromodiphenyl oxide
Pyrolysis studies of flame retarded plastic systems 499
Decalin
Cracking of decalin and tetralin in the presence of mixtures of *n*-decane and steam at about 810 °C 39
Decane
Cracking of Decalin and tetralin in the presence of mixtures of *n*-decane and stream at about 810 °C 39
Degradation
Degradation of synthetic polymers: application of some pyrolysis methods in an investigation of the degradation behaviour of ionomers containing methacrylate salt units 163
Deoxy sugars
Characterization of the saccharide composition of heteropolysaccharides by pyrolysis–capillary gas chromatography–mass spectrometry 297
Differential scanning calorimetry
Comparison of flash pyrolysis, differential scanning calorimetry, ^{13}C NMR and IR spectroscopy in the analysis of a highly aliphatic biopolymer from plant cuticles 287
Differential scanning calorimetry
Degradation of synthetic polymers: application of some pyrolysis methods in an investigation of the degradation behaviour of ionomers containing methacrylate salt units 163
2,4-Diketones
Characterisation of subfossil *Sphagnum* leaves, rootlets of Ericaceae and their peat by pyrolysis–high-resolution gas chromatography–mass spectrometry 377
Direct chemical ionization
Rapid characterization of *Salmonella* strains with direct chemical ionization pyrolysis 329
Discriminant analysis

Rapid characterization of *Salmonella* strains with direct chemical ionization pyrolysis 329
Discriminant analysis
The staphylococci: a classification and identification study using pyrolysis–gas–liquid chromatography 527

Egypt
Pyrolysis–mass spectrometry of natural gums, resins, and waxes and its use for detecting such materials in ancient Egyptian mummy cases (cartonnages) 195
Emissions
Pyrolysis and combustion of peat and wood as single particles and as a layer 149
Ethyl acrylate
Determination of reactive comonomers and/or amino resins in acrylic copolymers used in textile industry, by pyrolysis–gas chromatography–mass spectrometry 227
Evolved gas analysis
Thermal behaviour of polybenzhydrolimides 251

Factor analysis
The potential of pyrolysis–mass spectrometry for fermentation quality control 549
Fatty acids
Characterization of the aliphatic nature of kerogens isolated from marine sediments by vacuum pyrolysis 109
Fire-resistant materials
Mechanism of action and pyrolysis of brominated fire retardants in acrylonitrile–butadiene–styrene polymers 511
Fire-resistant materials
Pyrolysis studies of flame retarded plastic systems 499
Fire-resistant materials
Reaction products of triglycidyl isocyanurate with orthophosphoric and polyphosphoric acids: thermal behaviour and pyrolysis studies 263
Fire-resistant materials
Studies on the flame-retardant properties of transition metal complexes of cellulose ammonium phosphate 465
Fire-resistant materials
The role of pyrolysis in polymer combustion and flame retardance 451
Flash pyrolysis
Comparison of flash pyrolysis, differential scanning calorimetry, ^{13}C NMR and IR spectroscopy in the analysis of a highly aliphatic biopolymer from plant cuticles 287
Friedooleanane
Characterisation of subfossil *Sphagnum* leaves, rootlets of Ericaceae and their peat by pyrolysis–high-resolution gas chromatography–mass spectrometry 377
Fungi
Preliminary study of fungal spores by pyrolysis–gas chromatography 539

Gas chromatography
Amino acid sequence information in proteins and complex proteinaceous material revealed by pyrolysis–capillary gas chromatography–low and high resolution mass spectrometry 313
Gas chromatography
A review of biomarkers in kerogens as determined by pyrolysis–gas chromatography and pyrolysis–gas chromatography–mass spectrometry 93
Gas chromatography
Characterisation of beech wood and its holocellulose and xylan fractions by pyrolysis–gas chromatography–mass spectrometry 417
Gas chromatography
Characterisation of subfossil *Sphagnum* leaves, rootlets of Ericaceae and their peat by pyrolysis–high-resolution gas chromatography–mass spectrometry 377
Gas chromatography
Characterization of the aliphatic nature of kerogens isolated from marine sediments by vacuum pyrolysis 109
Gas chromatography
Characterization of the saccharide composition of heteropolysaccharides by pyrolysis–capillary gas chromatography–mass spectrometry 297
Gas chromatography
Chemical characterization of Hungarian brown coals by Curie-point pyrolysis–low-energy electron impact mass spectrometry and multivariate analysis and by Curie-point pyrolysis–gas chromatography–photoionization mass spectrometry 125
Gas chromatography
Chemical characterization of recent and buried woods by analytical pyrolysis. Comparison of pyrolysis data with ^{13}C NMR and wet chemical data 437
Gas chromatography
Chemical structure of a soil humic acid as revealed by analytical pyrolysis 367
Gas chromatography
Comparison of flash pyrolysis, differential scanning calorimetry, ^{13}C NMR and IR spectroscopy in the analysis of a highly aliphatic biopolymer from plant cuticles 287
Gas chromatography

Cracking of decalin and tetralin in the presence of mixtures of *n*-decane and steam at about 810 °C 39

Gas chromatography
Gas chromatographic and capillary gas chromatographic–mass spectrometric analysis of thermal decomposition products of liquid crystal polymers 233

Gas chromatography
Preliminary study of fungal spores by pyrolysis–gas chromatography 539

Gas chromatography
Some empirical considerations on the pyrolysis–gas chromatographic conditions required to obtain characteristic and reliable high-resolution pyrograms for polymer samples 181

Gas chromatography
Studies on isolated lignins and lignins in woody materials by pyrolysis–gas chromatography–mass spectrometry and off-line pyrolysis–gas chromatography with flame ionization detection 403

Gas chromatography
The staphylococci: a classification and identification study using pyrolysis–gas–liquid chromatography 527

Gas chromatography–mass spectrometry
A comparative study of the thermal degradation of unsaturated polyester resins containing various chlorinated norbornene dicarboxylic acid units in the backbone 277

Gas chromatography–mass spectrometry
Determination of reactive comonomers and/or amino resins in acrylic copolymers used in textile industry, by pyrolysis–gas chromatography–mass spectrometry 227

Gas chromatography–mass spectrometry
Evidence for the formation of 2,4-imidazolidinediones and pyrrolidino[1,2*a*]-3,6-piperazinediones in human hair pyrolyzate by pyrolysis–gas chromatography–mass spectrometry–mass spectrometry 15

Gas chromatography–mass spectrometry
Thermal decomposition of segments with two aromatic rings in thermostable macromolecules 245

Geological sediments
Indications from analytical pyrolysis on the evolution of organic materials in the temperate environment 355

Glucose
Carbohydrate pyrolysis. I. A continuous mass spectrometric method for the analysis of the resulting gaseous mixture 341

Gums, natural
Pyrolysis–mass spectrometry of natural gums, resins, and waxes and its use for detecting such materials in ancient Egyptian mummy cases (cartonnages) 195

Hair
Evidence for the formation of 2,4-imidazolidinediones and pyrrolidino[1,2*a*]-3,6-piperazinediones in human hair pyrolyzate by pyrolysis–gas chromatography–mass spectrometry–mass spectrometry 15

Heat transfer
The effects of heat and mass transport on the results of thermal decomposition studies. Part 1. The three reactions of calcium oxalate monohydrate 71

Hemicellulose
Characterisation of beech wood and its holocellulose and xylan fractions by pyrolysis–gas chromatography–mass spectrometry 417

Hexoses
Characterization of the saccharide composition of heteropolysaccharides by pyrolysis–capillary gas chromatography–mass spectrometry 297

Humic acids
Chemical structure of a soil humic acid as revealed by analytical pyrolysis 367

Humification
Indications from analytical pyrolysis on the evolution of organic materials in the temperate environment 355

2,4-Imidazolidinediones
Evidence for the formation of 2,4-imidazolidinediones and pyrrolidino[1,2*a*]-3,6-piperazinediones in human hair pyrolyzate by pyrolysis–gas chromatography–mass spectrometry–mass spectrometry 15

Infrared spectrometry
Comparison of flash pyrolysis, differential scanning calorimetry, ^{13}C NMR and IR spectroscopy in the analysis of a highly aliphatic biopolymer from plant cuticles 287

Ionomers
Degradation of synthetic polymers: application of some pyrolysis methods in an investigation of the degradation behaviour of ionomers containing methacrylate salt units 163

Kerogens
A review of biomarkers in kerogens as determined by pyrolysis–gas chromatography and pyrolysis–gas chromatography-mass spectrometry 93

Kerogens
Characterization of the aliphatic nature of kerogens isolated from marine sediments by vacuum pyrolysis 109

Kinetics, reaction
Kinetics of pyrolysis of solid samples 65
Kinetics, reaction
Polymer pyrolysis mechanisms: experimental approaches for investigating them 55
Kinetics, reaction
The effects of heat and mass transport on the results of thermal decomposition studies. Part 1. The three reactions of calcium oxalate monohydrate 71

Lignin
Characterisation of beech wood and its holocellulose and xylan fractions by pyrolysis–gas chromatography–mass spectrometry 417
Lignin
Chemical characterization of recent and buried woods by analytical pyrolysis. Comparison of pyrolysis data with ^{13}C NMR and wet chemical data 437
Lignin
Studies on isolated lignins and lignins in woody materials by pyrolysis–gas chromatography–mass spectrometry and off-line pyrolysis–gas chromatography with flame ionization detection 403
Lignocellulose
Studies on isolated lignins and lignins in woody materials by pyrolysis–gas chromatography–mass spectrometry and off-line pyrolysis–gas chromatography with flame ionization detection 403
Liquid crystals
Gas chromatographic and capillary gas chromatographic–mass spectrometric analysis of thermal decomposition products of liquid crystal polymers 233
Low-energy electron impact mass spectrometry
Chemical characterization of Hungarian brown coals by Curie-point pyrolysis–low-energy electron impact mass spectrometry and multivariate analysis and by Curie-point pyrolysis–gas chromatography–photoionization mass spectrometry 125
Lubricants
Temperature programmed pyrolysis–mass spectrometry 3

Macromolecules
Thermal decomposition of segments with two aromatic rings in thermostable macromolecules 245
Maintenance heating
Some empirical considerations on the pyrolysis–gas chromatographic conditions required to obtain characteristic and reliable high-resolution pyrograms for polymer samples 181
Maleic anhydride
A comparative study of the thermal degradation of unsaturated polyester resins containing various chlorinated norbornene dicarboxylic acid units in the backbone 277
Mass spectrometry
Amino acid sequence information in proteins and complex proteinaceous material revealed by pyrolysis–capillary gas chromatography–low and high resolution mass spectrometry 313
Mass spectrometry
A review of biomarkers in kerogens as determined by pyrolysis–gas chromatography and pyrolysis–gas chromatography–mass spectrometry 93
Mass spectrometry
Carbohydrate pyrolysis. I. A continuous mass spectrometric method for the analysis of the resulting gaseous mixture 341
Mass spectrometry
Characterisation of beech wood and its holocellulose and xylan fractions by pyrolysis–gas chromatography–mass spectrometry 417
Mass spectrometry
Characterisation of subfossil *Sphagnum* leaves, rootlets of Ericaceae and their peat by pyrolysis–high-resolution gas chromatography–mass spectrometry 377
Mass spectrometry
Characterization of the saccharide composition of heteropolysaccharides by pyrolysis–capillary gas chromatography–mass spectrometry 297
Mass spectrometry
Chemical characterization of recent and buried woods by analytical pyrolysis. Comparison of pyrolysis data with ^{13}C NMR and wet chemical data 437
Mass spectrometry
Chemical structure of a soil humic acid as revealed by analytical pyrolysis 367
Mass spectrometry
Comparison of flash pyrolysis differential scanning calorimetry, ^{13}C NMR and IR spectroscopy in the analysis of a highly aliphatic biopolymer from plant cuticles 287
Mass spectrometry
Gas chromatographic and capillary gas chromatographic–mass spectrometric analysis of thermal decomposition products of liquid crystal polymers 233
Mass spectrometry
Indications from analytical pyrolysis on the evolution of organic materials in the temperate environment 355
Mass spectrometry

Pyrolysis–mass spectrometry of natural gums, resins, and waxes and its use for detecting such materials in ancient Egyptian mummy cases (cartonnages) 195
Mass spectrometry
Pyrolysis–mass spectrometry studies of adhesives 213
Mass spectrometry
Rapid characterization of *Salmonella* strains with direct chemical ionization pyrolysis 329
Mass spectrometry
Studies on isolated lignins and lignins in woody materials by pyrolysis–gas chromatography–mass spectrometry and off-line pyrolysis–gas chromatography with flame ionization detection 403
Mass spectrometry
Studies on the flame-retardant properties of transition metal complexes of cellulose ammonium phosphate 465
Mass spectrometry
Temperature programmed pyrolysis–mass spectrometry 3
Mass spectrometry
The effects of heat and mass transport on the results of thermal decomposition studies. Part 1. The three reactions of calcium oxalate monohydrate 71
Mass spectrometry
The potential of pyrolysis–mass spectrometry for fermentation quality control 549
Mass spectrometry, tandem
Evidence for the formation of 2,4-imidazolidinediones and pyrrolidino[1,2*a*]-3,6-piperazinediones in human hair pyrolyzate by pyrolysis–gas chromatography–mass spectrometry–mass spectrometry 15
Mass transfer
The effects of heat and mass transport on the results of thermal decomposition studies. Part 1. The three reactions of calcium oxalate monohydrate 71
Methacrylate salts
Degradation of synthetic polymers: application of some pyrolysis methods in an investigation of the degradation behaviour of ionomers containing methacrylate salt units 163
Methylketones
Characterisation of subfossil *Sphagnum* leaves, rootlets of Ericaceae and their peat by pyrolysis–high-resolution gas chromatography–mass spectrometry 377
Methyl methacrylate
Determination of reactive comonomers and/or amino resins in acrylic copolymers used in textile industry, by pyrolysis–gas chromatography–mass spectrometry 227
Molybdenum oxide
Pyrolysis studies of flame retarded plastic systems 499
Multivariate analysis
Chemical characterization of Hungarian brown coals by Curie-point pyrolysis–low-energy electron impact mass spectrometry and multivariate analysis and by Curie-point pyrolysis–gas chromatography–photoionization mass spectrometry 125
Mummy cases
Pyrolysis–mass spectrometry of natural gums, resins, and waxes and its use for detecting such materials in ancient Egyptian mummy cases (cartonnages) 195

Naphthenes
Cracking of decalin and tetralin in the presence of mixtures of *n*-decane and steam at about 810 °C 39
Nuclear magnetic resonance
Comparison of flash pyrolysis, differential scanning calorimetry, ^{13}C NMR and IR spectroscopy in the analysis of a highly aliphatic biopolymer from plant cuticles 287

Oil shale
A review of biomarkers in kerogens as determined by pyrolysis–gas chromatography and pyrolysis–gas chromatography–mass spectrometry 93
Organic matter
Indications from analytical pyrolysis on the evolution of organic materials in the temperate environment 355

Paraffins
Cracking of decalin and tetralin in the presence of mixtures of *n*-decane and steam at about 810 °C 39
Peat
Characterisation of subfossil *sphagnum* leaves, rootlets of Ericaceae and their peat by pyrolysis–high-resolution gas chromatography–mass spectrometry 377
Peat
Pyrolysis and combustion of peat and wood as single particles and as a layer 149
Pentoses
Characterization of the saccharide composition of heteropolysaccharides by pyrolysis–capillary gas chromatography–mass spectrometry 297
Photoionization mass spectrometry
Chemical characterization of Hungarian brown coals by Curie-point pyrolysis–low-energy electron impact mass spectrometry and

multivariate analysis and by Curie-point pyrolysis–gas chromatography–photoionization mass spectrometry 125
2,5-Piperazinediones
Evidence for the formation of 2,4-imidazolidinediones and pyrrolidino[1,2*a*]-3,6-piperazinediones in human hair pyrolyzate by pyrolysis–gas chromatography–mass spectrometry–mass spectrometry 15
3,6-Piperazinediones, pyrrolidino[1,2*a*]-
Evidence for the formation of 2,4-imidazolidinediones and pyrrolidino[1,2*a*]-3,6-piperazinediones in human hair pyrolyzate by pyrolysis–gas chromatography–mass spectrometry–mass spectrometry 15
Polybenzhydrolimides
Thermal behaviour of polybenzhydrolimides 251
Poly[bis(benzimidazobenzisoquinolinones)]
Thermal decomposition of segments with two aromatic rings in thermostable macromolecules 245
Polyesters
A comparative study of the thermal degradation of unsaturated polyester resins containing various chlorinated norbornene dicarboxylic acid units in the backbone 277
Polyethylene
Comparison of flash pyrolysis, differential scanning calorimetry, ^{13}C NMR and IR spectroscopy in the analysis of a highly aliphatic biopolymer from plant cuticles 287
Polyethylene
Degradation of synthetic polymers: application of some pyrolysis methods in an investigation of the degradation behaviour of ionomers containing methacrylate salt units 163
Polymers
Comparison of flash pyrolysis, differential scanning calorimetry, ^{13}C NMR and IR spectroscopy in the analysis of a highly aliphatic biopolymer from plant cuticles 287
Polymers
Degradation of synthetic polymers: application of some pyrolysis methods in an investigation of the degradation behaviour of ionomers containing methacrylate salt units 163
Polymers
Determination of reactive comonomers and/or amino resins in acrylic copolymers used in textile industry, by pyrolysis–gas chromatography–mass spectrometry 227
Polymers
Gas chromatographic and capillary gas chromatographic–mass spectrometric analysis of thermal decomposition products of liquid crystal polymers 233
Polymers
Mechanism of action and pyrolysis of brominated fire retardants in acrylonitrile–butadiene–styrene polymers 511
Polymers
Polymer pyrolysis mechanisms: experimental approaches for investigating them 55
Polymers
Pyrolysis–mass spectrometry studies of adhesives 213
Polymers
Pyrolysis studies of flame retarded plastic systems 499
Polymers
Reaction products of triglycidyl isocyanurate with orthophosphoric and polyphosphoric acids: thermal behaviour and pyrolysis studies 263
Polymers
Some empirical considerations on the pyrolysis–gas chromatographic conditions required to obtain characteristic and reliable high-resolution pyrograms for polymer samples 181
Polymers
Studies on the flame-retardant properties of transition metal complexes of cellulose ammonium phosphate 465
Polymers
Temperature programmed pyrolysis–mass spectrometry 3
Polymers
The effects of heat and mass transport on the results of thermal decomposition studies. Part 2. Polystyrene, polytetrafluoroethylene and polypropylene 83
Polymers
The potential of pyrolysis–mass spectrometry for fermentation quality control 549
Polymers
Thermal behaviour of polybenzhydrolimides 251
Polymers
Thermal decomposition of segments with two aromatic rings in thermostable macromolecules 245
Polymers
The role of pyrolysis in polymer combustion and flame retardance 451
Polymethacrylate
Degradation of synthetic polymers: application of some pyrolysis methods in an investigation of the degradation behaviour of ionomers containing methacrylate salt units 163
Polypropylene
The effects of heat and mass transport on the results of thermal decomposition studies. Part 2. Polystyrene, polytetrafluoroethylene and polypropylene 83

Polysaccharides
Characterization of the saccharide composition of heteropolysaccharides by pyrolysis–capillary gas chromatography–mass spectrometry 297
Polysaccharides
Chemical characterization of recent and buried woods by analytical pyrolysis. Comparison of pyrolysis data with ^{13}C NMR and wet chemical data 437
Polysaccharides
Comparison of flash pyrolysis, differential scanning calorimetry, ^{13}C NMR and IR spectroscopy in the analysis of a highly aliphatic biopolymer from plant cuticles 287
Polysaccharides
The potential of pyrolysis–mass spectrometry for fermentation quality control 549
Polystyrene
Pyrolysis studies of flame retarded plastic systems 499
Polystyrene
The effects of heat and mass transport on the results of thermal decomposition studies. Part 2. Polystyrene, polytetrafluoroethylene and polypropylene 83
Polytetrafluoroethylene
The effects of heat and mass transport on the results of thermal decomposition studies. Part 2. Polystyrene, polytetrafluoroethylene and polypropylene 83
Poly(vinyl chloride)
Pyrolysis studies of flame retarded plastic systems 499
Principal components analysis
Indications from analytical pyrolysis on the evolution of organic materials in the temperate environment 355
Principal components analysis
Rapid characterization of *Salmonella* strains with direct chemical ionization pyrolysis 329
Principal components analysis
The potential of pyrolysis–mass spectrometry for fermentation quality control 549
1,2-Propanediol
A comparative study of the thermal degradation of unsaturated polyester resins containing various chlorinated norbornene dicarboxylic acid units in the backbone 277
Proteins
Amino acid sequence information in proteins and complex proteinaceous material revealed by pyrolysis–capillary gas chromatography–low and high resolution mass spectrometry 313
Pyrolysis reactor
Techniques in gas-phase thermolyses. Part 8. The fate of molecules in low-pressure pyrolysis reactors. A theoretical study 25

Rate constant
Polymer pyrolysis mechanisms: experimental approaches for investigating them 55
Reaction kinetics
Techniques in gas-phase thermolyses. Part 8. The fate of molecules in low-pressure pyrolysis reactors. A theoretical study 25
Reaction mechanism
Cracking of decalin and tetralin in the presence of mixtures of *n*-decane and steam at about 810 °C 39
Reaction mechanism
Degradation of synthetic polymers: application of some pyrolysis methods in an investigation of the degradation behaviour of ionomers containing methacrylate salt units 163
Reaction mechanism
Kinetics of pyrolysis of solid samples 65
Reaction mechanism
Polymer pyrolysis mechanisms: experimental approaches for investigating them 55
Reaction rate
Kinetics of pyrolysis of solid samples 65
Residence time
Techniques in gas-phase thermolyses. Part 8. The fate of molecules in low-pressure pyrolysis reactors. A theoretical study 25
Resins
Pyrolysis–mass spectrometry of natural gums, resins, and waxes and its use for detecting such materials in ancient Egyptian mummy cases (cartonnages) 195
Resins
Pyrolysis–mass spectrometry studies of adhesives 213
Rootlets of Ericaceae
Characterisation of subfossil *Sphagnum* leaves, rootlets of Ericaceae and their peat by pyrolysis–high-resolution gas chromatography–mass spectrometry 377

Saccharides
Characterization of the saccharide composition of heteropolysaccharides by pyrolysis–capillary gas chromatography–mass spectrometry 297
Salmonella
Rapid characterization of *Salmonella* strains with direct chemical ionization pyrolysis 329
Sample size
Polymer pyrolysis mechanisms: experimental approaches for investigating them 55
Sediments
Characterization of the aliphatic nature of

kerogens isolated from marine sediments by vacuum pyrolysis 109
Soils
Chemical structure of a soil humic acid as revealed by analytical pyrolysis 367
Soils, peat
Indications from analytical pyrolysis on the evolution of organic materials in the temperate environment 355
Sphagnum
Characterisation of subfossil *Sphagnum* leaves, rootlets of Ericaceae and their peat by pyrolysis–high-resolution gas chromatography–mass spectrometry 377
Stability
Degradation of synthetic polymers: application of some pyrolysis methods in an investigation of the degradation behaviour of ionomers containing methacrylate salt units 163
Staphylococci
The staphylococci: a classification and identification study using pyrolysis–gas–liquid chromatography 527
Steranes
A review of biomarkers in kerogens as determined by pyrolysis–gas chromatography and pyrolysis–gas chromatography–mass spectrometry 93
Suberin
Characterisation of subfossil *sphagnum* leaves, rootlets of Ericaceae and their peat by pyrolysis–high-resolution gas chromatography–mass spectrometry 377

Temperature–time profile
Polymer pyrolysis mechanisms: experimental approaches for investigating them 55
Tetralin
Cracking of decalin and tetralin in the presence of mixtures of *n*-decane and steam at about 810 °C 39
Thermal analysis
The role of pyrolysis in polymer combustion and flame retardance 451
Thermal decomposition
Cracking of decalin and tetralin in the presence of mixtures of *n*-decane and steam at about 810 °C 39
Thermal decomposition
The effects of heat and mass transport on the results of thermal decomposition studies. Part 2. Polystyrene, polytetrafluoroethylene and polypropylene 83
Thermal volatilisation analysis
Degradation of synthetic polymers: application of some pyrolysis methods in an investigation of the degradation behaviour of ionomers containing methacrylate salt units 163
Thermogravimetric analysis
Carbohydrate pyrolysis. I. A continuous mass spectrometric method for the analysis of the resulting gaseous mixture 341
Thermogravimetric analysis
Degradation of synthetic polymers: application of some pyrolysis methods in an investigation of the degradation behaviour of ionomers containing methacrylate salt units 163
Thermogravimetric analysis
Reaction products of triglycidyl isocyanurate with orthophosphoric and polyphosphoric acids: thermal behaviour and pyrolysis studies 263
Thermogravimetric analysis
The effects of heat and mass transport on the results of thermal decomposition studies. Part 1. The three reactions of calcium oxalate monohydrate 71
Thermogravimetric analysis
Thermal behaviour of polybenzhydrolimides 251
Thiophene
A review of biomarkers in kerogens as determined by pyrolysis–gas chromatography and pyrolysis–gas chromatography–mass spectrometry 93
Time-of-flight mass spectrometry
Pyrolysis studies of flame retarded plastic systems 499
Tobacco smoke and smoking
A review of pyrolysis studies to unravel reaction steps in burning tobacco 555
Transition metal complexes
Studies on the flame-retardant properties of transition metal complexes of cellulose ammonium phosphate 465
Triglycidyl isocyanurate
Reaction products of triglycidyl isocyanurate with orthophosphoric and polyphosphoric acids: thermal behaviour and pyrolysis studies 263

Uronic acids
Characterization of the saccharide composition of heteropolysaccharides by pyrolysis–capillary gas chromatography–mass spectrometry 297

Waxes
Pyrolysis–mass spectrometry of natural gums, resins, and waxes and its use for detecting such materials in ancient Egyptian mummy cases (cartonnages) 195
Wood
Chemical characterization of recent and buried woods by analytical pyrolysis. Com-

parison of pyrolysis data with ^{13}C NMR and wet chemical data 437
Wood
Pyrolysis and combustion of peat and wood as single particles and as a layer 149
Wood
Studies on isolated lignins and lignins in woody materials by pyrolysis–gas chromatography–mass spectrometry and off-line pyrolysis–gas chromatography with flame ionization detection 403
Wood, beech
Characterisation of beech wood and its holocellulose and xylan fractions by pyrolysis–gas chromatography–mass spectrometry 417
Xylan
Characterisation of beech wood and its holocellulose and xylan fractions by pyrolysis–gas chromatography–mass spectrometry 417
Zinc borate
Pyrolysis studies of flame retarded plastic systems 499

VOL. 11 JOURNAL OF ANALYTICAL AND APPLIED PYROLYSIS OCTOBER 1987

CONTENTS

PROCEEDINGS OF THE 7TH INTERNATIONAL SYMPOSIUM ON ANALYTICAL AND APPLIED PYROLYSIS, READING, SEPTEMBER 15–19, 1986

Preface
C.E.R. Jones 1

1. INSTRUMENTATION, METHODOLOGY

Temperature programmed pyrolysis–mass spectrometry
W.A. Westall (London, Great Britain) and A.J. Pidduck (Great Malvern, Great Britain) 3
Evidence for the formation of 2,4-imidazolidinediones and pyrrolidino[1,2*a*]-3,6-piperazinediones in human hair pyrolyzate by pyrolysis–gas chromatography–mass spectrometry–mass spectrometry
T.O. Munson and D.D. Fetterolf (Quantico, VA, U.S.A.) 15
Techniques in gas-phase thermolyses. Part 8. The fate of molecules in low-pressure pyrolysis reactors. A theoretical study
H. Egsgaard and L. Carlsen (Roskilde, Denmark) 25
Cracking of decalin and tetralin in the presence of mixtures of *n*-decane and steam at about 810°C
F. Billaud (Nancy, France), P. Chaverot (Vernaison, France) and E. Freund (Rueil-Malmaison, France) 39

2. PYROLYSIS MECHANISMS AND THERMODYNAMICS OF HEAT TRANSFER

Polymer pyrolysis mechanisms: experimental approaches for investigating them
R.S. Lehrle (Birmingham, Great Britain) 55
Kinetics of pyrolysis of solid samples
J.R. MacCallum (Fife, Great Britain) 65
The effects of heat and mass transport on the results of thermal decomposition studies. Part 1. The three reactions of calcium oxalate monohydrate
T. Szekely, G. Varhegyi, F. Till, P. Szabo and E. Jakab (Budapest, Hungary) 71
The effects of heat and mass transport on the results of thermal decomposition studies. Part 2. Polystyrene, polytetrafluoroethylene and polypropylene
T. Szekely, G. Varhegyi, F. Till, P. Szabo and E. Jakab (Budapest, Hungary) 83

3. FOSSIL FUELS

A review of biomarkers in kerogens as determined by pyrolysis–gas chromatography and pyrolysis–gas chromatography–mass spectrometry
R.P. Philp (Norman, OK, U.S.A.) and T.D. Gilbert (Sydney, Australia) 93
Characterization of the aliphatic nature of kerogens isolated from marine sediments by vacuum pyrolysis
K. Fukushima and R. Ishiwatari (Tokyo, Japan) 109
Chemical characterization of Hungarian brown coals by Curie-point pyrolysis–low-energy electron impact mass spectrometry and multivariate analysis and by Curie-point pyrolysis–gas chromatography–photoionizaton mass spectrometry
M. Nip (Amsterdam and Delft, The Netherlands), W. Genuit and J.J. Boon (Amsterdam, The Netherlands), J.W. de Leeuw and P.A. Schenck (Delft, The Netherlands) and M. Blazsó and T. Székely (Budapest, Hungary) 125
Pyrolysis and combustion of peat and wood as single particles and as a layer
M. Aho (Jyväskylä, Finland) 149

4. SYNTHETIC POLYMERS

Degradation of synthetic polymers: application of some pyrolysis methods in an investigation of the degradation behaviour of ionomers containing methacrylate salt units
I.C. McNeill and M. Barbour (Glasgow, Great Britain) 163
Some empirical considerations on pyrolysis–gas chromatographic conditions required to obtain characteristic and reliable high-resolution pyrograms for polymer samples
S. Tsuge, H. Ohtani, H. Matsubara and M. Ohsawa (Nagoya, Japan) 181
Pyrolysis–mass spectrometry of natural gums, resins, and waxes and its use for detecting such materials in ancient Egyptian mummy cases (cartonnages)
M.M. Wright and B.B. Wheals (London, Great Britain) 195
Pyrolysis–mass spectrometry studies of adhesives
C.J. Curry (London, Great-Britain) 213
Determination of reactive comonomers and/or amino resins in acrylic copolymers used in textile industry, by pyrolysis–gas chromatography–mass spectrometry
A.M. Casanovas and X. Rovira (Barcelona, Spain) 227
Gas chromatographic and capillary gas chromatographic–mass spectrometric analysis of thermal decomposition products of liquid crystal polymers
M. Blazsó and B. Zelei (Budapest, Hungary), B.R. Gandhe (Gwalior, India) and D. Sek (Zabrze, Poland) 233
Thermal decomposition of segments with two aromatic rings in thermostable macromolecules
M. Blazsó and E. Jakab (Budapest, Hungary) 245
Thermal behaviour of polybenzhydrolimides
L. Costa and G. Camino (Torino, Italy), M.E. Quenneson (Vernaison, France) and M. Bartholin (Torino, Italy) 251
Reaction products of triglycidyl isocyanurate with orthophosphoric and polyphosphoric acids: Thermal behaviour and pyrolysis studies
G. Audisio and A. Rossini (Milan, Italy) and F. Severini and R. Gallo (Messina, Italy) 263
A comparative study of the thermal degradation of unsaturated polyester resins containing various chlorinated norbornene dicarboxylic acid units in the backbone
G.H. Irzl, C.T. Vijayakumar, J.K. Fink and K. Lederer (Leoben, Austria) 277

5. NATURAL POLYMERS

Comparison of flash pyrolysis, differential scanning calorimetry, ^{13}C NMR and IR spectroscopy in the analysis of a highly aliphatic biopolymer from plant cuticles
M. Nip and J.W. de Leeuw (Delft, The Netherlands), P.J. Holloway (Bristol, Great Britain) and J.P.T. Jensen, J.C.M. Sprenkels, M. de Pooter and J.J.M. Sleeckx (Terneuzen, The Netherlands) 287
Characterization of the saccharide composition of heteropolysaccharides by pyrolysis–capillary gas chromatography–mass spectrometry
R.J. Helleur (St. John's, Canada) 297
Amino acid sequence information in proteins and complex proteinaceous material revealed by pyrolysis–capillary gas chromatography–low and high resolution mass spectrometry
J.J. Boon (Amsterdam, The Netherlands) and J.W. de Leeuw (Delft, The Netherlands) 313
Rapid characterization of *Salmonella* strains with direct chemical ionization pyrolysis
A.C. Tas, J. de Waart, J. Bouwman, M.C. ten Noever de Brauw and J. van der Greef (Zeist, The Netherlands) 329
Carbohydrate pyrolysis. I. A continuous mass spectrometric method for the analysis of the resulting gaseous mixture
A.E. Pavlath and K.S. Gregorski (Berkeley, CA, U.S.A.) 341
Indications from analytical pyrolysis on the evolution of organic materials in the temperate environment
J.M. Bracewell and G.W. Robertson (Aberdeen, Great Britain) 355
Chemical structure of a soil humic acid as revealed by analytical pyrolysis
C. Saiz-Jimenez (Sevilla, Spain) and J.W. de Leeuw (Delft, The Netherlands) 367

Characterisation of subfossil *Sphagnum* leaves, rootlets of Ericaceae and their peat by pyrolysis–high-resolution gas chromatography–mass spectrometry
D.G. van Smeerdijk and J.J. Boon (Amsterdam, The Netherlands) 377
Studies on isolated lignins and lignins in woody materials by pyrolysis–gas chromatography–mass spectrometry and off-line pyrolysis–gas chromatography with flame ionization detection
O. Faix, D. Meier and I. Grobe (Hamburg, F.R.G.) 403
Characterisation of beech wood and its holocellulose and xylan fractions by pyrolysis–gas chromatography–mass spectrometry
A.D. Pouwels, A. Tom, G.B. Eijkel and J.J. Boon (Amsterdam, The Netherlands) 417
Chemical characterization of recent and buried woods by analytical pyrolysis. Comparison of pyrolysis data with ^{13}C NMR and wet chemical data
C. Saiz-Jimenez (Sevilla, Spain), J.J. Boon (Amsterdam, The Netherlands), J.I. Hedges (Seattle, WA, U.S.A.) and J.K.C. Hessels and J.W. de Leeuw (Delft, The Netherlands) 437

6. FIRE, PROPAGATION AND RETARDATION

The role of pyrolysis in polymer combustion and flame retardance
C.F. Cullis (London, Great Britain) 451
Studies on the flame-retardant properties of transition metal complexes of cellulose ammonium phosphate
B. Kaur, R.K. Jain, I.S. Gur and H.L. Bhatnagar (Kurukshetra, India) and H.-R. Schulten (Wiesbaden, F.R.G.) 465
Pyrolysis studies of flame retarded plastic systems
D. Price, G.J. Milnes, C. Lukas and A.M. Phillips (Salford, Great Britain) 499
Mechanism of action and pyrolysis of brominated fire retardants in acrylonitrile–butadiene–styrene polymers
M.P. Luda di Cortemiglia, G. Camino and L. Costa (Torino, Italy) and P. Roma and A. Rossi (Ferrara, Italy) 511

7. BIOMEDICAL

The staphylococci: a classification and identification study using pyrolysis–gas–liquid chromatography
J.M. Hindmarch and J.T. Magee (Sheffield, Great Britain) 527
Preliminary study of fungal spores by pyrolysis–gas chromatography
G. Papa and P. Balbi (Torino, Italy) and G. Audisio (Milan, Italy) 539
The potential of pyrolysis–mass spectrometry for fermentation quality control
F.H. Cottee and I.G. Blackwell (Sittingbourne, Great Britain) 549

8. FOOD AND TOBACCO

A review of pyrolysis studies to unravel reaction steps in burning tobacco
R.R. Baker (Southampton, Great Britain) 555

Author Index 575

Subject Index 578
